PREFACE

Praise to Allah SWT, for giving me the opportunity to complete this book, "English in Biology Learning". I would also like to express my gratitude to my family for their continued support and motivation, which enabled me to successfully complete this book.

This book is arranged and contains concepts related to the use of English in biology learning. It contains descriptions of concepts and structures for English use, compiled by reviewing literature from various valid sources, including journals and textbooks. This book is beneficial for readers because it contains detailed and comprehensive information, enabling readers to gain a more meaningful understanding of the use of English in biology learning.

In conclusion, no ivory is perfect. This book, too, has its shortcomings, and requires constructive feedback to improve its quality in the future. Hopefully, this book will be as useful as it was intended.

SYNOPSIS

English in Biology Learning is a cutting-edge educational book created to meaningfully and contextually combine biological topics with English language proficiency. This book acts as a link between science education and language acquisition.

This book begins by exploring the importance of English as a global language in biology learning, emphasizing its role in accessing research, understanding scientific texts, and participating in international collaboration. Furthermore, this book engages readers to comprehend deeper about the eight parts of speech; tenses; passive voice; gerund vs infinitive; noun clause; adjective clause; adverb clause; conditional sentence; and punctuation.

Furthermore, to support active learning, this book also includes integrated activities by checking the understanding by answering the questions. To conclude, "English in Biology Learning" is expected to be able to engage readers to not only understand biological concepts but also to communicate these concepts effectively in English.
