PREFACE

English language skills are essential skills in globalization era. The idea for developing this book started with the experience of teaching English to math and science students who needed teaching materials to facilitate the practice of English skills, including reading, listening, speaking, and writing in order to understanding their respective scientific contexts. We hope this book can improve the reader skills in English.

This book does not discuss general English material because it focuses on advanced skills in practising reading, listening, speaking and writing skills for the reader. The author makes special features in this book to make the learning process easier. These features are:

1. Read It
2. Practice It
3. Exercise

Read It, is a feature that briefly explains basic English language skills according to the studied chapter. For example, basic information about reading skills for chapter 1, brief information about listening skills for chapter 2, specific information about speaking skills for chapter 3, concise information about academic writing 1 for chapter 4, detailed information about academic writing 2 (essay) for chapter 5, and brief information about scientific writing for chapter 6.

Practice It, is a feature to practice English skills that are being studied using math and science content. Reader can practice reading, listening, speaking, and writing skills using the instructions provided in the book.

Exercise, is a feature for further training on the skills that have been practised. This feature provides instructions for questions that require applying English language skills using math and science content.

The hope is the reader can be more confident in practising English to understand content based on their field (math, physics, chemistry, biology, integrated science) after they have programmed English courses for specific purposes. Thank you to all those who supported the preparation of this book. Nothing is perfect except the Most Perfect. We always welcome criticism and suggestions for improvement in the future. We hope this book is valuable.
